Experiment No. 9: AI and Analytics Using Zia

1. AIM

To study the AI capabilities of Zia and explore data analysis and insights in the Job Application Management System using Zoho Creator.

2. THEORY

Zia is Zoho's AI assistant that helps users analyze data, identify patterns, and generate insights. In Zoho Creator, AI and analytics features help users understand recruitment data and support better decision-making.

Key Features:

- **Data Analysis:** Analyzes candidate application data to identify recruitment trends and patterns.
- **Charts and Reports:** Displays application statistics using charts and visualizations.
- **Predictions:** Supported AI features can predict outcomes based on available recruitment data.
- **Natural Language Interaction:** Supported Zia features allow users to ask questions about recruitment data using natural language.

3. PROCEDURE

1. Log in to Zoho Creator and open the Job Application Management System.
2. Add sample candidate application records to the application.
3. Navigate to the Reports section.
4. Create charts and summary reports using the available recruitment data.
5. Explore the Zia or AI-powered features available in the account.
6. Analyze recruitment trends, application patterns, and generated summaries.
7. Verify the AI-generated insights using the application records.

4. APPLICATION

In the Job Application Management System, Zia analytics can help identify the number of applications received, analyze recruitment trends, monitor interview status, and generate reports for better hiring decisions. Charts and summaries help HR managers evaluate recruitment performance efficiently.

5. RESULT

The AI and analytics capabilities of Zia in Zoho Creator were successfully studied. Reports, charts, visualizations, and available AI insights helped analyze recruitment data and supported better decision-making in the Job Application Management System.
