Experiment 1: Comparative Study of Low-Code Development using Job Application Form

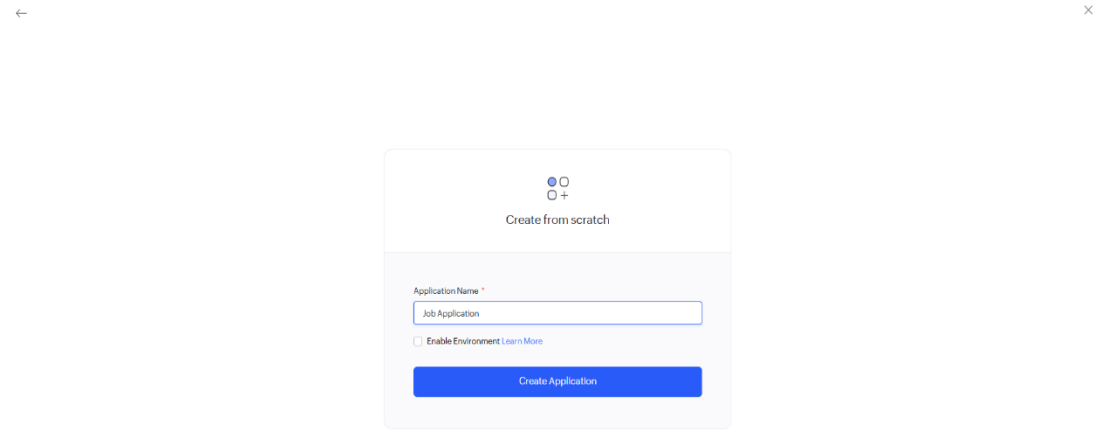

Aim

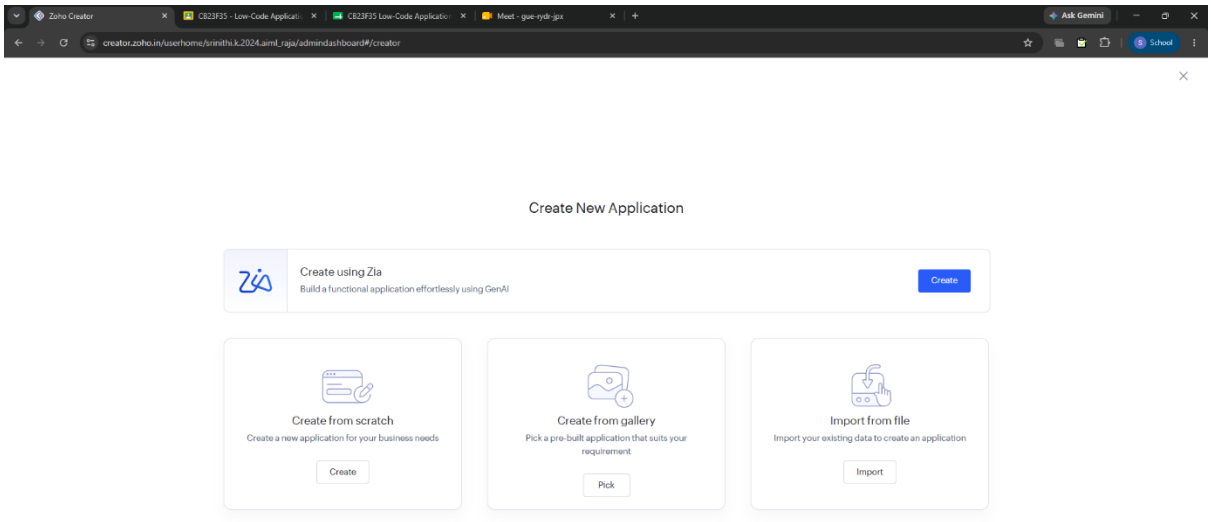

To study the advantages of developing the Job Application Form using a low-code platform (Zoho Creator) compared with traditional programming.

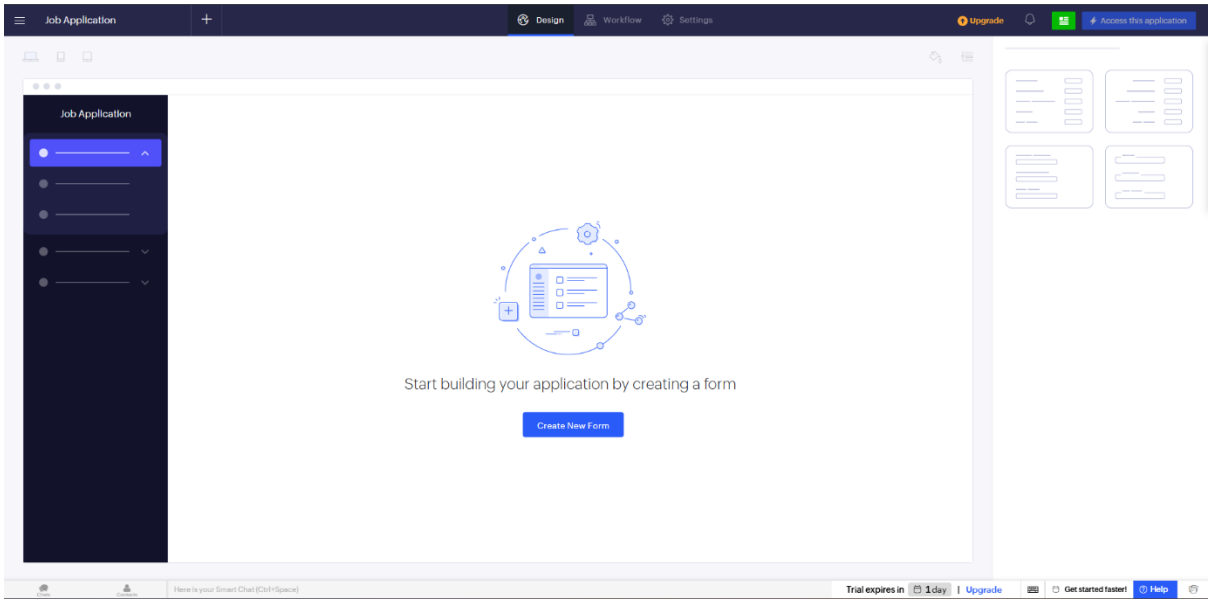

Comparison Table

Traditional Development	**Low-Code (Zoho Creator)**
Write HTML, CSS, JavaScript manually	Drag-and-drop Form Builder
Write backend code for data storage	Automatic database creation
Manual validation using programming	Built-in field validation
Manual report generation	Auto-generated reports
Longer development time	Faster application development
Requires more coding knowledge	Minimal coding required
Manual deployment and maintenance	Easy deployment and maintenance

SCREENSHOOTS:

Observation

Developing the Job Application Form using Zoho Creator is faster, easier, and requires minimal coding. The drag-and-drop interface automatically creates the database, validates user inputs, and generates reports, making the recruitment process more efficient than traditional development.

Result

The comparative study of **Low-Code Development using the Job Application Form** was completed successfully. It was observed that Zoho Creator simplifies application development by reducing coding effort, speeding up development, and providing built-in features for form creation, validation, and reporting.
